GGD Snip — Setup & User Guide

Excel add-in for snipping values from PDF bank statements into cells, linked to their source. Geiszler Garage Door LLC.

What's in the folder

index.html, app.js, app.css, core.js, commands.html, assets folder	The add-in itself. These go online (Step 1).
manifest.xml	Tells Excel where the add-in lives. Stays on your PC (Steps 2–3).
sample-statement.pdf	A fake statement to practice on.

Step 1 — Put the add-in online (one time, about 10 minutes)

Excel only loads add-ins from a secure (https) web address. GitHub Pages hosts it for free.

1. Go to **github.com** and create a free account (or sign in). Note your **username**.
2. Click **+** (top right) → **New repository**. Name it exactly **ggd-snip**, choose **Public**, and click **Create repository**.
3. Click **uploading an existing file**. Drag in **index.html, app.js, app.css, core.js, commands.html** and the whole **assets** folder. Click **Commit changes**.
4. Open the repository's **Settings** → **Pages**. Under *Build and deployment*, set Source to **Deploy from a branch**, Branch to **main**, and folder to **/ (root)**, then click **Save**.
5. Wait 1–2 minutes, then visit **https://YOURUSERNAME.github.io/ggd-snip/**. You should see the GGD Snip panel with "Preview mode" at the bottom, which means it's live.

Privacy: only the add-in's code is public. Your statements are never uploaded. They open and stay on your computer.

Step 2 — Point the manifest at your copy

1. Right-click **manifest.xml** → **Open with** → **Notepad**.
2. Press **Ctrl+H**. Find: **YOURNAME**. Replace with: your GitHub username. Click **Replace All**, then **Save**.

Step 3 — Install it in Excel

1. Create a folder **C:\GGDAddin** and put **manifest.xml** in it.
2. Right-click the folder → **Properties** → **Sharing** tab → **Share…** → **Share** → **Done**. Copy the **Network Path** shown (it looks like **\\YOURPC\GGDAddin**).
3. In Excel: **File** → **Options** → **Trust Center** → **Trust Center Settings** → **Trusted Add-in Catalogs**. Paste the network path into *Catalog Url*, click **Add catalog**, tick **Show in Menu**, and click **OK** twice.
4. Close and reopen Excel.
5. Go to **Home** → **Add-ins** → **More Add-ins** → **SHARED FOLDER**, select **GGD Snip**, and click **Add**. A **Snip PDF** button appears on the Home tab.

You only do Steps 1–3 once. If you change the add-in files later, upload the new versions to GitHub, and Excel picks them up the next time it opens.

Using it

1 Click **Snip PDF** on the Home tab. Click **Open PDF** and choose a statement, or drag PDFs onto the panel.

2 Click the cell in Excel where the value should go.

3 Drag a box around the number on the PDF. The value lands in the cell, the cell turns light blue, and the selection moves down one cell for the next snip.

4 Later, click any blue cell. The panel opens that statement to the right page and flashes the box the value came from. Click a box on the PDF to jump to its cell.

Number	One amount. $1,234.56 → 1234.56; (45.00) or 45.00- → -45. Dates in the box are ignored. If the box holds several amounts, it uses the first and tells you.
Sum	Adds every amount in the box. Drag down an Amount column to foot it.
Text	Copies the words, such as a payee or description.

- **Re-snip** a cell by selecting it and dragging a new box. The old link is replaced.
- **Remove link**: select the cell and click *Remove link* in the yellow bar. The value stays.
- **Settings** (bottom of the panel) turns off move-down, blue shading, OCR, or box outlines.

Good to know

- Links are saved **in the workbook**: a hidden sheet named **GGD_Snips** (an audit log of every snip) plus a named range for each cell. Don't delete them. Inserting or moving rows is fine, because links follow the cell.
- The PDFs are stored inside the add-in on **this computer**. On another PC, or after removing a PDF from the list, open the same PDF again and every link reconnects automatically.
- **Scanned statements** (pictures with no selectable text) are read with OCR. The first one takes a few seconds. Always double-check OCR values.
- The panel needs an internet connection to load. It works in Microsoft 365 Excel for Windows, and also in Excel on the web and on Mac.

Troubleshooting

GGD Snip isn't under SHARED FOLDER	Check the catalog path in Trust Center, make sure Show in Menu is ticked, and restart Excel.
Panel is blank or shows an error	Open https://YOURUSERNAME.github.io/ggd-snip/ in a browser. If it doesn't load, recheck Step 1 (Pages settings, and files in the top level of the repository, not in a subfolder).
"No number found in that box"	Draw the box a little larger around the whole number.
Snip landed in the wrong cell	It always uses the cell selected in Excel. Click the right cell first, then snip again. Clear the wrong cell normally.
